IEC 62752 / IEC 62955 Short Circuit Withstand

Compliance with IEC 62752 or similar standards for short circuit withstand is a function of both relay design and PCB layout. ZETTLER's relay design and applications engineering teams have developed a set of applications notes that contain important design suggestions to optimize the performance of the AZEV140 relay with respect to its short circuit current withstand capability. Please contact your local ZETTLER relay office for these important application notes and suggestions.

In addition, as the overall performance depends on multiple factors such as part arrangement and trace routing, compliance cannot be generically guaranteed by ZETTLER. We strongly encourage customers to conduct their own short circuit tests in accordance with IEC 62752 or similar standards in the context of their individual application design.
